HUMAN AND CELL CENTRED ROBOTICS

Domenico PRATTICHIZZO
Professor of Robotics and Automation
University of Siena

Thursday 4th May 2023
6:00 PM Conference Hall

We do believe that robotics and AI should be designed to work with and not to substitute humans. We envision a future where humans and robots co-evolve, sharing biological and artificial intelligence and their sensorimotor skills. If we take this

human-centred robotics vision to the extreme, we will land to cell-centred robotics. In this conference, I will present some novel ideas for human and cell-centred robotics that can enhance the quality of life for humans.
